(54) KEY TELEPHONE SYSTEM

(57)Abstract:

PURPOSE: To switch a direct inward dialing incoming and a general incoming without connecting a trunk line for releasing the direct inward dialing by terminating a call to a telephone set for direct inward dialing incoming when direct inward dialing is terminated when an order to execute general incoming other than the direct inward dialing incoming is stored, and making it a general incoming when there is no response within a time stored in a 2nd storing means.

CONSTITUTION: When discriminated as a day state for terminating direct inward dialing by the state stored at a night switching state storage device 14, a central controller 13 terminates a call to a direct inward dialing central office line circuit 21 and terminates it to a telephone set 23 which corresponds to that direct inward dialing number. When it is decided to be a night state for executing the general incoming other than the direct inward dialing incoming, when it is terminated to the direct inward dialing central office line circuit 21, it is terminated to the telephone set 23 corresponding to that direct inward dialing number, a timer which times the time set on a general incoming time storage device 15 is started, and when the terminated telephone set 23 does not respond during that time, it is switched to the general incoming.
